Texas Commission on Environmental Quality

Date of Distribution: 06/16/2025 Population Served: 800 Complete each section: Report Year: 2024 Direct Delivery - Check the applicable statement. The CCR was delivered in physical form or electronically to all customers. Direct link to CCR: panolabethanywatersupply.godaddysites.com Our system serves fewer than 500 people, and a notice that the CCR is available
Complete each section: Direct Delivery - Check the applicable statement. The CCR was delivered in physical form or electronically to all customers. Direct link to CCR: panolabethanywatersupply.godaddysites.com Our system serves fewer than 500 people, and a notice that the CCR is available
Direct Delivery - Check the applicable statement. The CCR was delivered in physical form or electronically to all customers. Direct link to CCR: panolabethanywatersupply.godaddysites.com Our system serves fewer than 500 people, and a notice that the CCR is available
 The CCR was delivered in physical form or electronically to all customers. Direct link to CCR: panolabethanywatersupply.godaddysites.com Our system serves fewer than 500 people, and a notice that the CCR is available
Direct link to CCR: panolabethanywatersupply.godaddysites.com Our system serves fewer than 500 people, and a notice that the CCR is available
Our system serves fewer than 500 people, and a notice that the CCR is available
Good Faith Delivery - Check at least one method. Posted the CCR online
Mailed the CCR to people who receive mail, but who do not receive bills
Advertised the availability of the CCR in news media
Posted the CCR in public places
☐ Delivered multiple copies to single billing addresses serving multiple persons
Delivered multiple copies of the CCR to community organizations
Other: Posted website link on customer bills, and two social medial sites.
Public Notice - Check if applicable.
☐ I have included or attached additional mandatory language to satisfy public notice
requirements due to drinking water violations.
Wholesale Providers - Check one if applicable.
 Our water system distributed the appropriate drinking water quality data to the
receiving water systems by April 1 as described in 30 TAC 290.274(g).
 Our water system did not provide water by any means to connected active water
systems.
I certify the above referenced water system has distributed the consumer confidence report identified above, and that the information in the notice is correct and consistent, in accordance with applicable regulations under Title 30 of the Texas Administrative Code, Chapter 290 and/or Title 40 of the Code of Federal Regulations, Chapter 141.
identified above, and that the information in the notice is correct and consistent, in accordance with applicable regulations under Title 30 of the Texas Administrative Code, Chapter 290 and/or Title 40 of the Code of Federal Regulations, Chapter 141.
identified above, and that the information in the notice is correct and consistent, in accordance with applicable regulations under Title 30 of the Texas Administrative Code,

Deliver this completed and signed form along with a representative copy of the Consumer Confidence Report using one of the following methods:

Email (recommended)	Certified Mail	Regular Mail		
PWSCCR@tceq.texas.gov	TCEQ DWSF, MC-155, Attn: CCR 12100 Park 35 Circle Austin, TX 78753	TCEQ DWSF, MC-155, Attn: CCR PO Box 13087 Austin, TX 78711-3087		

Instructions for completing Consumer Confidence Reports are available online at: https://www.tceq.texas.gov/drinkingwater/ccr

2024 Consumer Confidence Report for Public Water System PANOLA-BETHANY WSC

For more information regarding this report contact: This is your water quality report for January 1 to December 31, 2024 Name Panola Bethany WSC PANOLA-BETHANY WSC provides ground water from linsert source name of aquifer, reservoir, and/or river] located in [insert name of County or City]. Phone 903-331-5123 or 903-692-0060 Este reporte incluye información importante sobre el agua para tomar. Para asistencia en español, favor de llamar al telefono (903)331-5123. **Definitions and Abbreviations** The following tables contain scientific terms and measures, some of which may require explanation. **Definitions and Abbreviations** The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow. Action Level: Regulatory compliance with some MCLs are based on running annual average of monthly samples. Avg: A Level 1 assessment is a study of the water system to identify potential problems and determine (if possible) why total coliform bacteria have been found in our Level 1 Assessment: water system. A Level 2 assessment is a very detailed study of the water system to identify potential problems and determine (if possible) why an E. coli MCL violation has occurred Level 2 Assessment: and/or why total coliform bacteria have been found in our water system on multiple occasions. The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology. Maximum Contaminant Level or MCL: The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety. Maximum Contaminant Level Goal or MCLG: The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial Maximum residual disinfectant level or MRDL: contaminants. The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to Maximum residual disinfectant level goal or MRDLG: control microbial contaminants. million fibers per liter (a measure of asbestos) MFL millirems per year (a measure of radiation absorbed by the body) mrem: not applicable. na: nephelometric turbidity units (a measure of turbidity) NTU picocuries per liter (a measure of radioactivity) pCi/L

Definitions and Abbreviations

ppb: micrograms per liter or parts per billion

ppm: milligrams per liter or parts per million

ppq parts per quadrillion, or picograms per liter (pg/L)

ppt parts per trillion, or nanograms per liter (ng/L)

Treatment Technique or TT: A required process intended to reduce the level of a contaminant in drinking water.

Information about your Drinking Water

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the EPAs Safe Drinking Water Hotline at (800) 426-4791.

Contaminants that may be present in source water include:

- Microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- Inorganic contaminants, such as salts and metals, which can be naturally-occurring or result from urban storm water runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
- Pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm water runoff, and residential uses.
- Organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban storm water runoff, and septic systems.
- Radioactive contaminants, which can be naturally-occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, EPA prescribes regulations which limit the amount of certain contaminants in water provided by public water systems. FDA regulations establish limits for contaminants in bottled water which must provide the same protection for public health.

Contaminants may be found in drinking water that may cause taste, color, or odor problems. These types of problems are not necessarily causes for health concerns. For more information on taste, odor, or color of drinking water, please contact the system's business office.

You may be more vulnerable than the general population to certain microbial contaminants, such as Cryptosporidium, in drinking water. Infants, some elderly, or immunocompromised persons such as those undergoing chemotherapy for cancer; persons who have undergone organ transplants; those who are undergoing treatment with steroids; and people with HIV/AIDS or other immune system disorders, can be particularly at risk from infections. You should seek advice about drinking water from your physician or health care providers. Additional guidelines on appropriate means to lessen the risk of infection by Cryptosporidium are available from the Safe Drinking Water Hotline (800-426-4791).

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. We are responsible for providing high quality drinking water, but we cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at http://www.epa.gov/safewater/lead.

Information about Source Water

TCEQ completed an assessment of your source water, and results indicate that some of our sources are susceptible to certain contaminants. The sampling requirements for your water system is based on this susceptibility and previous sample data. Any detections of these contaminants will be found in this Consumer Confidence Report. For more information on source water assessments and protection efforts at our system contact [insert water system contact][insert phone number]

Lead and Copper	Date Sampled	MCLG	Action Level (AL)	90th Percentile	# Sites Over AL	Units	Violation	Likely Source of Contamination
Copper	09/06/2022	1.3	1.3	0.256	0	ppm		Erosion of natural deposits; Leaching from wood preservatives; Corrosion of household plumbing systems

2024 Water Quality Test Results

Disinfection By-Products	Collection Date	Highest Level Detected	Range of Individual Samples	MCLG	MCL	Units	Violation	Likely Source of Contamination
Haloacetic Acids (HAA5)	2024	5	5.2 - 5.2	No goal for the total	60	ppb	N	By-product of drinking water disinfection.

^{*}The value in the Highest Level or Average Detected column is the highest average of all HAA5 sample results collected at a location over a year

Total Trihalomethanes (TTHM) 20.	24	14	14.2 - 14.2	No goal for the total	80	ppb	N	By-product of drinking water disinfection.

^{*}The value in the Highest Level or Average Detected column is the highest average of all TTHM sample results collected at a location over a year

Inorganic Contaminants	Collection Date	Highest Level Detected	Range of Individual Samples	MCLG	MCL	Units	Violation	Likely Source of Contamination
Barium	2024	0.08	0.058 - 0.08	2	2	ppm	N	Discharge of drilling wastes; Discharge from metal refineries; Erosion of natural deposits.
Fluoride	2024	0.111	0.109 - 0.111	4	4.0	ppm	N	Erosion of natural deposits; Water additive which promotes strong teeth; Discharge from fertilizer and aluminum factories.
Nitrate [measured as Nitrogen]	2024	0.0219	0 - 0.0219	10	10	ppm	N	Runoff from fertilizer use; Leaching from septic tanks, sewage; Erosion of natural deposits.

Disinfectant Residual

A blank disinfectant residual table has been added to the CCR template, you will need to add data to the fields. Your data can be taken off the Disinfectant Level Quarterly Operating Reports (DLQOR).

Disinfectant Residual	Year	Average Level	Range of Levels Detected	MRDL	MRDLG	Unit of Measure	Violation (Y/N)	Source in Drinking Water
Chlorine	2024	0.45	0.5 – 0.51	4	4	Mg/l	N	Water additive used to control microbes.
